1 x 19 Stainless Steel Wire

1x19 AISI316 stainless steel strand is a very popular stainless steel construction. Used heavily throughout the marine industry, 1x19's excellent breaking load and low stretch characteristics along with its' aesthetic appeal make it a favourite for marine, structural and balustrade applications as well as many others, examples of which are shown below:

- Balustrades
- Standing Rigging
- Mast Stays
- Guardrails
- Structural
- Stay Wires
- Marine/Saltwater Environment
- Sewage Treatment Works

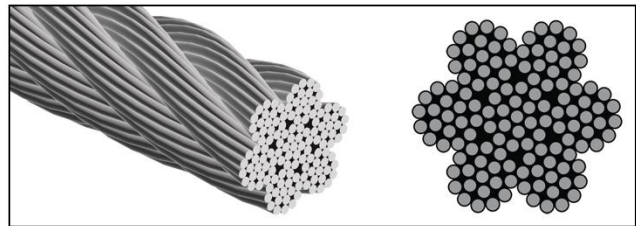

7 x 7 Stainless Steel Wire

7x7 AISI316 stainless steel wire rope is used for a wide range of applications. More flexible than 1x19 but more rigid than 7x19, the 7x7 construction is often used where 1x19 lacks enough flexibility for an application or where 7x19's weaker breaking load is too low for an application. Used extensively throughout the marine industry as well as for general engineering applications, 7x7's excellent breaking load and flexibility in the smaller diameters make it a favourite for control cable and a variety of marine rigging applications, examples of which are shown below:

- Control Cables
- Guardrails
- Standing Rigging
- Running Rigging
- Wire Rope Slings
- Davit Ropes
- Marine/Saltwater Environment
- Sewage Treatment Works

7 x 19 Stainless Steel Wire

7x19 AISI316 stainless steel wire rope is used for a wide range of applications. Extremely flexible when compared to both 1x19 and 7x7, the 7x19 construction is often used where a flexible stainless steel wire rope is particularly required. 7x19 performs well for running applications. Used extensively throughout the marine industry as well as for general engineering applications, 7x19's excellent flexibility make it a favourite for control cable and a variety of marine rigging applications, examples of which are shown below:

- Control Cables
- Guardrails
- Standing Rigging
- Running Rigging
- Steering Cable
- Davit Ropes
- Marine/Saltwater Environment
- Wire Rope Slings
